

Northfield, VT, and Chelsea, MA - September 4, 2002

NatWorks Incorporated, a recognized worldwide leader in providing native Data Extraction and Change Data Capture (CDC) solutions for Software AG's ADABAS database management system, today announced a partnership with Reliance Technology, an emerging leader in XML technology.

As a result of this partnership, NatWorks' data extraction and CDC capabilities have been integrated with Reliance Technology's Any2XML product, with the synergy of this partnership producing the ability to cost-effectively publish both ADABAS data and ADABAS Protection Log data directly to the web.

According to Chris Bradley, President of NatWorks Inc., "ADABAS customers have traditionally been faced with significant challenges to being able to integrate ADABAS data directly to the Web. The historical approach to providing basic ADABAS-to-Web integration has necessitated expensive middleware as well as large amounts of programming time, and the plain truth is that Web integration of ADABAS data does not have to be expensive or involve any programming.

"With NatWorks' ability to natively address the challenges of handling ADABAS data, coupled with Reliance Technology's straight-forward approach to automatic XML generation with XSL and Web publishing results in a solution that WILL be of significant interest to existing Software AG customers," continues Bradley. "The combination of NatQuery and Any2XML results in a Web Enablement solution for ADABAS that is extremely powerful, flexible and extremely cost-effective."

About NatWorks Inc.

Based in Northfield, VT, NatWorks, Inc. is a privately held corporation focused on providing native data extraction and Change Data Capture solutions to users of Software AG's ADABAS database management system.

Since NatWorks was formed in 1998, NatWorks has an established a worldwide customer install base and is rapidly becoming the recognized leader for native data extraction solutions in the Software AG marketplace.
